HACKATHON PITCH DECK

SafarAI

An intelligent travel companion that plans, protects, and guides every journey across Pakistan.

> *SafarAI transforms a simple travel idea into a complete, safe, personalized, and budget-friendly journey — within seconds.*

THE PROBLEM

Trip planning is scattered, slow, and stressful

Six apps to plan one trip — and still no clarity when it matters

Planning a trip in Pakistan means juggling several disconnected apps and still ending up unprepared.

- Google Maps gives a route, but nothing about real road conditions or rest stops
- Separate booking sites for hotels, disconnected from the actual trip budget
- No single place for weather, packing guidance, or safety information
- Manual budget math for fuel, food, hotels, and emergency reserves
- Northern areas have weak internet — most apps fail exactly when needed most
- No local context: prayer stops, halal food, family planning, nearest hospital

> *"Planning even a short trip can take hours — and one surprise, like a weather change or a closed road, can undo the whole journey."*

THE SOLUTION

One prompt. One complete travel plan.

Natural language in, a full journey out

Instead of searching across five apps, the traveler simply describes the trip in plain language:

> *"I have PKR 40,000. I'm traveling from Sukkur to Hunza with friends for five days."*

Within seconds, SafarAI returns a complete, personalized travel plan — route, budget, hotels, packing list, and safety information — built specifically around Pakistan's travel realities.

Demo example — Sukkur to Lahore, 4 people, 2 days, PKR 45,000, travelling by car. SafarAI instantly returns departure time, route and rest stops, fuel estimate, hotel suggestions, food budget, places to visit, packing list, and emergency contacts.

BASELINE, HANDLED

- Smart Itinerary
- Budget Calculator
- Packing Checklist
- Offline Access

WHAT NO OTHER TRAVEL APP HAS

The features that make this pitch memorable

Every travel app plans a route. Very few of them keep you safe, solvent, and connected to home.

Live Hazard Map & Risk Score

Crowdsourced alerts for landslides, flooding, potholes, and checkpoints, condensed into a live Trip Risk Score with a smarter departure time.

Group Expense Split

Automatically splits fuel, hotel, and food costs across the group and settles who owes who — no manual tracking after the trip.

Family Safety Circle

Automatic check-in messages to family at each rest stop, sent by SMS so it still works where mobile data doesn't.

Urdu Voice Mode

Plan and query trips by speaking in Urdu — built for hands-free driving and for users who aren't comfortable typing in English.

Fuel & Cash Finder

Maps CNG/petrol stations and ATMs along remote routes — critical where fuel is sparse and cards aren't accepted.

Prayer-Aware Routing

Auto-adjusts departure and rest timing around the five daily prayers for that day and location — not just a pin on the map.

LOCALIZATION LAYER

Built for Pakistan, not a generic map app

Beyond the headline features, every screen assumes local context by default

LOCAL CHALLENGE	HOW SAFARAI HANDLES IT
Uncertain road conditions	Route-aware planning with rest stops and buffer time
Limited internet in northern areas	Offline trip card with saved itinerary and contacts
Family-friendly travel	Trip style input — family, friends, or solo — shapes the plan
Local transport options	Plans realistically around car, bus, or mixed transport
Prayer stops & halal food	Built into the itinerary and recommendations by default
Emergency planning	Safety Mode with hospitals, police, and live location
Urdu and English users	Bilingual support from day one

LIVE DEMO WALKTHROUGH

What the judges will see

One input, a complete trip output

INPUT

```
Sukkur → Lahore  |  4 people  |  2 days  |  PKR 45,000  |  By car
```

Departure	5:30 AM recommended	**Route & Stops**	Auto-generated with breaks
Risk Score	82% safe — go as planned	**Fuel Estimate**	Calculated for full round trip
Group Split	PKR 11,250 per person	**Hotels**	Matched to budget and group size
Food Budget	Split across meals and days	**Places to Visit**	Filtered by time and budget left
Packing List	Weather and duration based	**Emergency**	Hospitals, police & SMS check-in to family

MVP screens for the hackathon: **Login / Guest Mode → Trip Details Form → AI-Generated Itinerary → Budget Breakdown → Packing Checklist → Emergency Screen.**

A polished, working journey planner — not a pile of half-built features.

TECH STACK

Fast to build, easy to demo

A stack chosen for hackathon speed and reliability

FRONTEND **React / Next.js**	BACKEND **FastAPI**	DATABASE **Supabase**
AI ENGINE **Gemini API**	MAPS **Google Maps API**	WEATHER **OpenWeather API**

TARGET USERS

Who this is for

Solo travelers · Families · Backpackers · Students · Road trip enthusiasts · Tourists visiting Pakistan

BEYOND THE HACKATHON

From live alerts to a fully autonomous travel agent

Hazard alerts and the Risk Score already make SafarAI proactive — this is the next step

- Adjusts the itinerary automatically when weather or road conditions change
- Proactively suggests alternatives when a plan risks going over budget
- Flags safety concerns in real time along the route
- Long-term vision: negotiating and booking hotels on the traveler's behalf

Future vision — Say "Plan a five-day family trip to Skardu under PKR 80,000," and SafarAI books accommodations, plans the route, estimates expenses, suggests attractions, creates a packing list, monitors weather, and assists throughout the journey.

SafarAI

An AI-powered travel companion that plans, guides, protects, and adapts throughout the entire journey — built for how people actually travel across Pakistan.
